

- adjusting & thinning -
Dune Explorer 2.2.0
for personal preferences

This is a short Tutorial to adjust Dune Explorer 2.2.0 if you do not need all Icons and Synopsis.Templates.

You can thin Dune Explorer 2.2.0 to your personal preferences by deleting all parts you do not need by a very simple way.

Thinning the Synopsis.Templates:

Go to your #:\Dune Explorer 2.2.0\Synopsis Folder and delete/remove all xxx.Dune.Explorer.Synopsis.Template.xml and the corresponding *.png datasets you do not need for your personal Dune Explorer Version.

Thats all for the Templates.

Thinning the Synopsis.Icons:

Go to your #:\Dune Explorer 2.2.0\Icons Folder and open the Dune.Explorer.Icons.Template.xml with any Texteditor (i prefer Notepad++)

Delete/remove all Icon entries you do not need like:

```
<Icon name="XE-BluRay">  
  <ImageFilename>XE-bluray.png</ImageFilename> (icon image file)*  
  <PositionX>56</PositionX>  
  <PositionY>27</PositionY>  
  <PositionWidth>195</PositionWidth>  
  <PositionHeight>261</PositionHeight>  
</Icon>
```

... and all corresponding .png image files* at your #:\Dune Explorer 2.2.0\Icons Folder

Thats all, restart your Dune Explorer 2.2.0

Remember, after a Dune Explorer 2.2.0 Update, do not overwrite the Synopsis & Icon Folder if you do not want update/reset your Templates and Icons to default!
