

DUNE Media Player Custom Templates by Xearox

Manual to use the Templates:

In the „XEAROX_DARK_ONE.rar“ & „ANIME.rar“ you find the current XE-Templates for your Movie Database.

It is very simple to use this for your own.

The „ANIME.rar“ is a single Template only for Anime Movies & Series, it has nothing to do with the „XEAROX_DARK_ONE“ Template !!!

Copy the „COMPLETE“ !!! **content** of the „XEAROX DARK ONE“ folder or the content of the „ANIME.rar“ into the ROOT of your chosen Hard Drive, it should look like this:

(XEAROX_DARK_ONE Template)

Move your Movies (ready Folders done by Dune Explorer) into the sub-categories.
Thats all folks!

You can change your displayed drive name by editing the dune_folder.txt from the root.
Open it and change:

```
storage_name=YOUR DUNE-HDD  
storage_caption=YOUR DUNE-HDD
```

into anything like – **My First Dune Drive** or whatever

also you can change or add a new displayed ICON for your Drive
change:

```
icon_path=USB3-HDD.png to HDD.png or a selfmade ICON
```

To skin your Center Picture at the sub-category (Actin/SciFi etc etc) change the:

icon_path=action.png

at the subfolder „dune_folder.txt“

to **icon_path=action1.png / icon_path=action2.png** etc etc etc

The Folder „**11 Browse**“

Many friends asked me to add a folder with a browse option to add „movies/trailer/music/files or a Dune Firmware

To this Folder you can copy your unready Movies/CDs or anything else for a fast access.

You have also the possibility to add more Folders into „**11 Browse**“ like „**Photos**“ or whatever you prefer, there is no Limit.

The „**HDD TEMP**“ folder contains the Dune HDD Temperature Tool (this works only with 3.5“ installed Drives, not for USB)

For the future there will be more Basic Layouts for Movies or Audio CDs.
